|   |              |  |

## 3. EXTERNAL DIMENSIONS (⊕⊖ unit: mm)

### 4. BLOCK DIAGRAM

#### **5. PIN ASSIGNMENT**

| PIN | SYMBOL | Descriptions            |  |  |  |  |  |  |
|-----|--------|-------------------------|--|--|--|--|--|--|
| 1   | GND    | Ground of Logic Circuit |  |  |  |  |  |  |
| 2   | VDD    | Power Supply for Logic  |  |  |  |  |  |  |
| 3   | SCK    | Serial clock input.     |  |  |  |  |  |  |
| 4   | SDA    | Serial data input.      |  |  |  |  |  |  |

### 6. ABSOLUTE MAXIMUM RATINGS

| Parameter                          | Symbol           | Min    | Max | Unit | Notes |
|------------------------------------|------------------|--------|-----|------|-------|
| Supply Voltage for Logic           | V <sub>DD</sub>  | -0.3   | 4   | V    | 1, 2  |
| Supply Voltage for Display         | V <sub>CC</sub>  | 0      | 16  | V    | 1, 2  |
| Supply Voltage for DC/DC           | V <sub>BAT</sub> | -0.3   | 5   | V    | 1, 2  |
| Operating Temperature              | T <sub>OP</sub>  | -40    | 85  | °C   |       |
| Storage Temperature                | T <sub>STG</sub> | -40    | 85  | °C   | 3     |
| Life Time (120 cd/m <sup>2</sup> ) | •                | 10,000 | -   | hour | 4     |
| Life Time (80 cd/m <sup>2</sup> )  |                  | 30,000 | -   | hour | 4     |
| Life Time (60 cd/m <sup>2</sup> )  | •                | 50,000 | -   | hour | 4     |

Note 1: All the above voltages are on the basis of " $V_{SS} = 0V''$ .

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 3. "Optics & Electrical Characteristics". If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate.

Note 4:  $V_{CC}$  = 12.0V,  $T_a$  = 25°C, 50% Checkerboard.

Software configuration follows Section 4.4 Initialization.

End of lifetime is specified as 50% of initial brightness reached. The average operating lifetime at room temperature is estimated by the accelerated operation at high temperature conditions.

## 7. ELECTRICAL CHARACTERISTICS

#### 7.1. Optics Characteristics

| Characteristics   | Symbol          | Conditions  | Min          | Тур          | Мах          | Unit   |
|---|-----------------|-------------|--------------|--------------|--------------|--------|
| Brightness<br>(V <sub>cc</sub> Supplied Externally)         | L <sub>br</sub> | Note 5      | 80           | 100          | -            | cd/m²  |
| Brightness<br>(V <sub>cc</sub> Generated by Internal DC/DC) | L <sub>br</sub> | Note 6      | 50           | 60           | -            | cd/m²  |
| C.I.E. (Blue)   | (x)<br>(y)      | C.I.E. 1931 | 0.10<br>0.20 | 0.14<br>0.24 | 0.18<br>0.28 |        |
| C.I.E. (Yellow)   | (x)<br>(y)      | C.I.E. 1931 | 0.43<br>0.45 | 0.47<br>0.49 | 0.51<br>0.53 |        |
| Dark Room Contrast  | CR              |             | -            | 2000:1       | -            |        |
| Viewing Angle   |                 |             | -            | Free         | -            | degree |

\* Optical measurement taken at  $V_{DD}$  = 2.8V,  $V_{CC}$  = 12V & 7.25V. Software configuration follows Section 4.4 Initialization.

Note 3: The defined temperature ranges do not include the polarizer. The maximum withstood temperature of the polarizer should be 80°C.

#### 7.2. DC CHARACTERISTICS

| Characteristics  | Symbol   | Conditions                         | Min                 | Тур  | Max                 | Unit |
|--|--|------------------------------------|---------------------|------|---------------------|------|
| Supply Voltage for Logic   | V <sub>DD</sub>                                  |                                    | 1.65                | 2.8  | 3.3                 | v    |
| Supply Voltage for Display<br>(Supplied Externally)                                    | Vcc  | Note 5<br>(Internal DC/DC Disable) | 11.5                | 12.0 | 12.5                | v    |
| Supply Voltage for DC/DC   | $V_{\rm SMT}$                                    | Internal DC/DC Enable              | 3.5                 | -    | 4.2                 | V    |
| Supply Voltage for Display<br>(Generated by Internal DC/DC)                            | Vcc  | Note 6<br>(Internal DC/DC Enable)  | 7.0                 | -    | 7.5                 | V    |
| High Level Input   | VIH  | I <sub>OUT</sub> = 100μA, 3.3MHz   | $0.8 \times V_{DD}$ | -    | V <sub>DD</sub>     | v    |
| Low Level Input  | VIL  | I <sub>OUT</sub> = 100μA, 3.3MHz   | 0                   | -    | $0.2 \times V_{DD}$ | v    |
| High Level Output  | V <sub>OH</sub> I <sub>OUT</sub> = 100µA, 3.3MHz |                                    | $0.9 \times V_{DD}$ | -    | VDD                 | v    |
| Low Level Output   | VoL  | I <sub>OUT</sub> = 100μA, 3.3MHz   | 0                   | -    | 0.1×V <sub>DD</sub> | v    |
| Operating Current for V <sub>DD</sub>  | I <sub>DD</sub>                                  |                                    | -                   | 180  | 300                 | μΑ   |
| Operating Current for $V_{CC}$<br>( $V_{CC}$ Supplied Externally)                      | I <sub>CC</sub>                                  | Note 7                             | -                   | 12.3 | 16                  | mA   |
| Operating Current for V <sub>MT</sub><br>(V <sub>CC</sub> Generated by Internal DC/DC) | Імт  | Note 8                             | -                   | 21   | 28.0                | mΑ   |
| Sleep Mode Current for V <sub>DD</sub>   | I <sub>DD, SLEEP</sub>                           |                                    | -                   | 1    | 5                   | μA   |
| Sleep Mode Current for $V_{CC}$  | $I_{\text{CC}_{\text{r}}}_{\text{SLEEP}}$        |                                    | -                   | 2    | 10                  | μΑ   |

Note 5 & 6: Brightness (L<sub>br</sub>) and Supply Voltage for Display (V<sub>CC</sub>) are subject to the change of the panel characteristics and the customer's request.

Note 7: V<sub>DD</sub> = 2.8V, V<sub>CC</sub> = 12V, 100% Display Area Turn on.

Note 8: V<sub>DD</sub> = 2.8V, V<sub>CC</sub> = 7.25V, 100% Display Area Turn on.

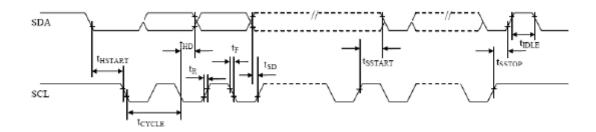

\* Software configuration follows Section 4.4 Initialization.

#### **7.3.AC CHARACTERISTICS**

| Symbol              | Description  | Min | Max | Unit |
|---------------------|--|-----|-----|------|
| t <sub>cycle</sub>  | Clock Cycle Time   | 2.5 | -   | μs   |
| t <sub>HSTART</sub> | Start Condition Hold Time  | 0.6 | -   | μs   |
| +                   | Data Hold Time (for "SDA <sub>OUT</sub> " Pin)                               | 0   |     | 20   |
| t <sub>HD</sub>     | Data Hold Time (for "SDA <sub>IN</sub> " Pin)                                | 300 | -   | ns   |
| t <sub>SD</sub>     | Data Setup Time  | 100 | -   | ns   |
| t <sub>sstart</sub> | Start Condition Setup Time<br>(Only relevant for a repeated Start condition) | 0.6 | -   | μs   |
| t <sub>SSTOP</sub>  | Stop Condition Setup Time  | 0.6 | -   | μs   |
| t <sub>R</sub>      | Rise Time for Data and Clock Pin   |     | 300 | ns   |
| t <sub>F</sub>      | Fall Time for Data and Clock Pin   |     | 300 | ns   |
| t <sub>IDLE</sub>   | Idle Time before a New Transmission can Start                                | 1.3 | -   | μs   |

1 I<sup>2</sup>C Interface Timing Characteristics:

\* (V<sub>DD</sub> - V<sub>SS</sub> = 1.65V to 3.3V, T<sub>a</sub> = 25°C)

Note (1) ""a" stands for "Don't care".

#### 9. FUNCTIONAL SPECIFICATION

#### 9.1 Commands

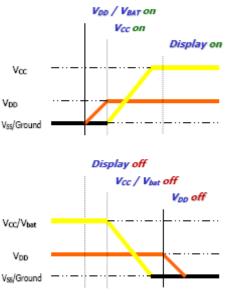

Refer to the Technical Manual for the SSD1306

#### 9.2 Power down and Power up Sequence

To protect OEL panel and extend the panel life time, the driver IC power up/down routine should include a delay period between high voltage and low voltage power sources during turn on/off. It gives the OEL panel enough time to complete the action of charge and discharge before/after the operation.

92.1 Power up Sequence:

- 1. Power up V<sub>DD</sub>
- 2. Send Display off command
- 3. Initialization
- 4. Clear Screen
- 5. Power up V<sub>CC</sub>/ V<sub>BAT</sub>
- Delay 100ms (When V<sub>CC</sub> is stable)
- 7. Send Display on command
- 9.2.2 Power down Sequence:
  - 1. Send Display off command
  - 2. Power down V<sub>CC</sub> / V<sub>BAT</sub>
  - Delay 100ms (When V<sub>CC</sub> / V<sub>BAT</sub> is reach 0 and panel is completely discharges)
     Power down V<sub>DD</sub>

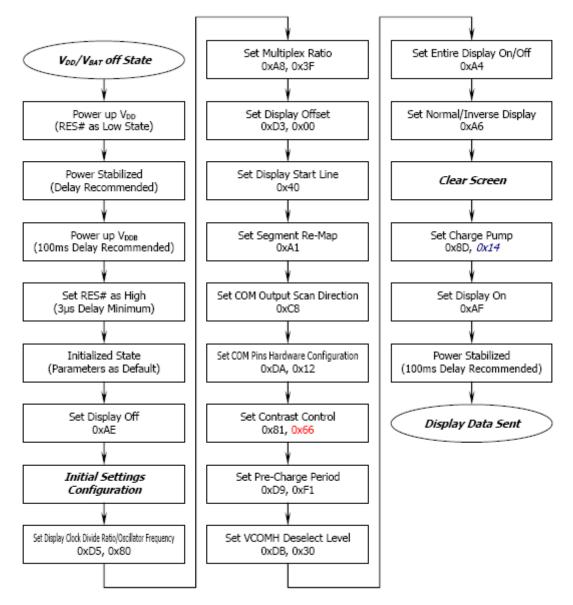

- Note 13:
  - 1) Since an ESD protection circuit is connected between  $V_{DD}$  and  $V_{CC}$  inside the driver IC,  $V_{CC}$  becomes lower than  $V_{DD}$  whenever  $V_{DD}$  is ON and  $V_{CC}$  is OFF.
  - 2) V<sub>CC</sub> / V<sub>BAT</sub> should be kept float (disable) when it is OFF.
  - 3) Power Pins (V<sub>DD</sub>, V<sub>CC</sub>, V<sub>BAT</sub>) can never be pulled to ground under any circumstance.
  - 4) V<sub>DD</sub> should not be power down before V<sub>CC</sub> / V<sub>BAT</sub> power down.

#### 9.3 Reset Circuit

When RES# input is low, the chip is initialized with the following status:

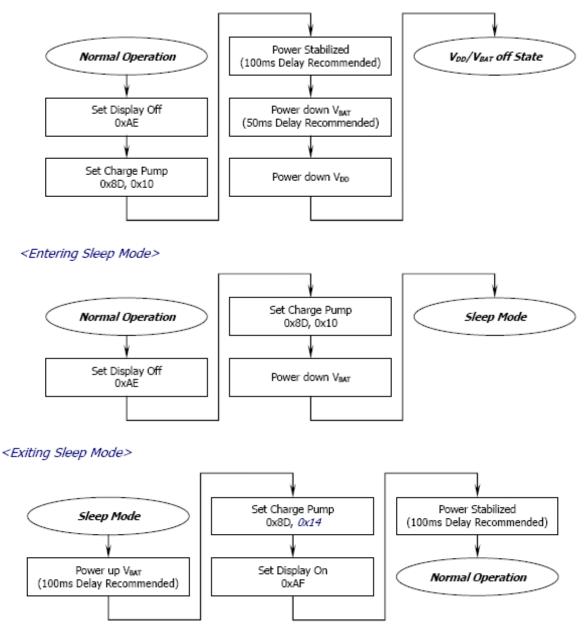

- 1. Display is OFF
- 2. 128×64 Display Mode
- Normal segment and display data column and row address mapping (SEG0 mapped to column address 00h and COM0 mapped to row address 00h)
- 4. Shift register data clear in serial interface
- 5. Display start line is set at display RAM address 0
- 6. Column address counter is set at 0
- 7. Normal scan direction of the COM outputs
- 8. Contrast control register is set at 7Fh
- 9. Normal display mode (Equivalent to A4h command)

#### 9.4 Actual Application Example

If the noise is accidentally occurred at the displaying window during the operation, please reset the display in order to recover the display function.

#### <Power down Sequence>

### **10. MODULE ACCEPT QUALITY LEVEL (AQL)**

10.1 AQL Standard Value: Critical Defect =0.1, Major Defect=0.65; Minor Defect =2.5 10.2 Inspection Standard: MIL-STD-105E Table Normal Inspection Single Sampling Level II

#### **11. RELIABILITY TEST.**

#### 11.1 Contents of Reliability Tests

| Item                                | Conditions                               | Criteria        |  |  |  |  |
|-------------------------------------|--|-----------------|--|--|--|--|
| High Temperature Operation          | 70°C, 240 hrs                            |                 |  |  |  |  |
| Low Temperature Operation           | -40°C, 240 hrs                           |                 |  |  |  |  |

| High Temperature/Humidity Operation | 60°C, 90% RH, 120 hrs                    |                 |  |  |  |  |
| Thermal Shock                       | -40°C ⇔ 85°C, 24 cycles<br>60 mins dwell |                 |  |  |  |  |

\* The samples used for the above tests do not include polarizer.

\* No moisture condensation is observed during tests.

#### 112 Failure Check Standard

After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at  $23\pm5^{\circ}$ C;  $55\pm15^{\circ}$  RH.

#### **12. QUALITY DESCRIPTION & APPLICTION NOTE**

Please refer to "General Inspection Criteria" document.
